Repository Management with Nexus

Repository managers serve two purposes: they act as highly configurable proxies between your organization and the public Maven repositories and they also provide an organization with a deployment destination for your own generated artifacts. "Repository Management with Nexus" walks you through the installation process for both the Open Source version of Nexus and Nexus Professional, and it covers important topics such as:

Repository Management Best Practices Installing Nexus as a Standalone Service Installing Nexus in a Servlet Container Configuring Nexus LDAP Integration Managing the Procurement of Artifacts Deploying Maven Sites to Nexus

Uploading Artifacts Uploading Artifact Bundles Proxying a Remote Repository Managing Maven Settings Using the Maven Nexus Plugin Support for P2 Repositories Support for OSGi Bundle Repositories Nexus Opensearch Integration Introduction to Repository Management Supporting Enterprise Collaboration Securing a Nexus Installation
